

Anton Iosifov — Full Stack Developer

iosifov.a.14@gmail.com | [053-4223948](tel:053-4223948) | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

Full-Stack Engineer with production startup experience building scalable web applications using **React**, **Node.js**, **TypeScript**, **PHP** (Laravel), and **MongoDB**. Experienced in developing **REST APIs**, working with relational and non-relational databases, integrating AI-powered features and analytics tools, and building modern frontend and backend systems. Passionate about clean architecture, product development, and solving real-world problems in fast-paced engineering environments.

EXPERIENCE

Platforma365 (Startup) — Full-Stack Developer

Tel Aviv, Israel | 2025

Developed internal onboarding systems and business tools using **PHP** (Laravel Blade), **JavaScript**, and **MySQL** in a production SaaS environment. Contributed to backend **REST API** features including validation, routing, controllers, and business logic implementation. Built backend data extraction and transformation workflows using **cURL**, **Regex**, and **JSON** processing for handling unstructured legal data. Collaborated with engineering and product teams in Agile workflows using **Git** and **Jira**.

PROJECTS

Factory Management System — Full-Stack Project

Node.js · Express · MongoDB · React · TypeScript · JWT · OpenAI API · Docker · Git

Developed internal employee management and scheduling system using **Node.js** (Express.js) with layered backend architecture and asynchronous services. Implemented **JWT** and **MongoDB** (Mongoose) for authentication, data modeling, and queries. Developed frontend features using **React** and **TypeScript**, integrating backend APIs with **Axios**. Connected **OpenAI LLM API** for auto shift scheduling and Excel export. Containerized with **Docker** and maintained version control with **Git**, and deployed frontend/backend services using Vercel and Render.

Seacret Residence — Commercial Real Estate Marketing Platform

Next.js · React · TypeScript · Tailwind CSS · Sanity CMS · PostHog · Vercel · Git

Developed a multilingual commercial real-estate marketing platform using **Next.js**, **React**, and **TypeScript** with support for English, Hebrew (RTL), Russian, and Greek. Integrated **Sanity CMS** for dynamic content management, localized content workflows, and residence catalog management. Implemented lead/contact workflows with server-side validation (**Zod**), email delivery (**Resend**), **Cloudflare Turnstile** protection, and IP-based rate limiting using **Upstash Redis**. Added analytics and performance monitoring using **PostHog**, **Google Tag Manager**, and **Vercel Analytics**. Improved production readiness with SEO optimization, structured data (JSON-LD), accessibility improvements, security headers, CI workflows, **Playwright** E2E testing, and responsive deployment on **Vercel**.
